Category Name User & Algorithm Models

Actionee HAIS

Sub Category

Subject Killian Server

Description of Problem or Suggestion:

As was noted during the presentation, the 'killian' server used to model daily distribution of user accesses is a development machine accessed only by IMS development team members and DAACs. This was discovered by HAIS during analysis, but no plan was presented to gather access data from other servers.

Originator's Recommendation

A similar profile should be gathered from operational Version 0 machines at each of the DAACs.

HAIS R. E. Jarvis/Tyahla

HAIS Response Date 5/16/95

The daily distribution of user accesses shown at PDR was based on data from the "killians" server at GSFC. The shape of the curve has been validated by comparison with World Wide Web access statistics for the home pages at GSFC and at JPL. The accesses to the URDB also have the same time of day distribution. We also intend to obtain the VO statistics from the DAACs. In addition, we have met with system administrators at NCAR and plan to obtain their data for further validation.
